

BrightPath Tech

Live in sixteen weeks

Replacement of the Library Management System

Greenfield City Library Service operates a central library and eleven branch libraries serving approximately 184,000 registered members. The present library management system was commissioned in 2006, is no longer supported by its original vendor, and cannot support self-service borrowing, online renewals, or consolidated reporting across branches. The Service invites proposals for a replacement covering catalogue management, membership, circulation (borrowing, returns, renewals, reservations), inter-branch transfers, overdue fines, and public search.

Submitted to	Greenfield City Library Service
RFP reference	GCLS/RFP/2026/014
Submission date	2026-09-11
Proposed duration	4 months

FICTIONAL DOCUMENT -- prepared for an academic exercise. Greenfield City Library Service, the suppliers and all references named in this document are invented. No real organisation is described.

1. Executive Summary and Understanding of the Requirement

BrightPath Tech offers Greenfield City Library Service the fastest and lowest cost route off its unsupported 2006 system. We can have the Service live on a modern cloud platform in sixteen weeks at a total three year cost substantially below any custom build. We understand the Service needs catalogue, membership, circulation, reservations, inter-branch transfers, fines and public search.

Our position is straightforward: every month the current system remains in service is a month of operational risk on software no vendor will patch. We prioritise getting the Service onto supported software quickly, then improving from there. Our platform is already built. The Service is configuring a product, not funding a development programme.

- Sixteen weeks from contract signature to go-live
- Lowest total three year cost of ownership of any realistic option
- No capital licence -- a single predictable annual subscription
- Product roadmap improvements included at no extra charge

2. Proposed Solution and Technical Approach

BrightPath Library Cloud is a multi-tenant SaaS application hosted on a major public cloud provider. The Service receives a configured tenant rather than a bespoke deployment. Configuration covers branch structure, loan rules, fine tariffs, membership categories and catalogue fields. The public search interface is responsive and works on mobile without a separate app.

Integration with the existing RFID kiosks is achieved through our standard SIP2 connector. Payment for fines uses our built-in payment module. Staff log in with username and password; single sign-on against the council directory is on our roadmap for 2027 and can be discussed.

Because the platform is multi-tenant, the Service benefits from every improvement we ship to all customers. The corresponding constraint, which we state plainly, is that customisations outside our configuration options are not generally available, and workflows unique to the Service may need to be adapted to the product rather than the reverse.

- Multi-tenant SaaS; no infrastructure for the Service to run
- Standard SIP2 connector for existing RFID kiosks
- Built-in fines payment module
- Single sign-on not available at launch; roadmap item for 2027

3. Implementation Plan, Team and Milestones

Sixteen weeks, four phases. The plan assumes the Service can make configuration decisions within five working days of each request.

Phase	Weeks	Key deliverable	Lead role
1. Kick-off and configuration	1-4	Tenant configured to agreed rules	Implementation Consultant
2. Data import	5-9	Catalogue and member data imported	Implementation Consultant
3. Integration and training	10-13	SIP2 connector live, staff trained remotely	Technical Consultant
4. Go-live	14-16	Cutover weekend, 1 week remote support	Implementation Consultant

The team is three people: an Implementation Consultant (1.0 FTE), a Technical Consultant (0.5 FTE) and a part-time Account Manager. Data migration is performed using our standard import tool; the Service is responsible for cleansing and supplying data in our published CSV template, and for verifying the imported records. One import rehearsal is included; additional rehearsals are chargeable at day rate.

4. Commercial Proposal

Our pricing is the lowest in this competition and we are confident it will remain so. There is no perpetual licence; the subscription includes all platform updates.

One-off implementation charges	Amount
Solution setup and configuration	\$34,000
Subscription onboarding	\$22,000
Development and customisation	\$58,000
Data migration, standard import	\$38,000
Integration services	\$22,000
Training, 2 days remote	\$12,000
Total one-off charges	\$186,000
Recurring annual charges	Amount
SaaS subscription, 12 sites	\$24,000

Recurring annual charges	Amount
Support, business hours, email	\$10,000
Total per year	\$34,000
Total cost of ownership	\$186,000 + 3 x \$34,000 = \$288,000

Figures are quoted over a 3 year contract term and exclude sales tax.

Commercial assumptions:

- Data supplied by the Service in our published CSV template, already cleansed
- One data import rehearsal included; further rehearsals charged at day rate
- Training delivered remotely; on-site training available at additional cost
- Existing kiosks are SIP2 compliant without modification
- Prices exclude applicable sales tax

5. Security, Compliance and Risk Controls

Security is taken seriously at BrightPath Tech. Our platform is hosted with a major cloud provider whose data centres carry industry-leading certifications, and we follow industry best practice throughout our development lifecycle. Data is encrypted and access is controlled.

We are a young company and have not yet completed formal certification ourselves; an ISO 27001 programme is planned. We are happy to complete the Service's own security questionnaire during contract negotiation and to discuss any specific requirements the Service may have around data handling and retention.

Risk	Likelihood	Mitigation
Data not supplied in required template	Medium	Template published at kick-off
Configuration decisions delayed	Medium	Weekly checkpoint call

6. Support Model, Experience and References

Support is provided by email and web portal during business hours, 09:00 to 17:00 Monday to Friday, with a target response of one business day. Out-of-hours cover is not included in the standard subscription. There is no named service delivery manager at this contract value; our support team operates a shared queue.

BrightPath Tech was founded in 2023 and employs 18 staff. This would be our largest deployment to date and our first in the public library sector. Our comparable experience:

- Hallow Community Trust, 2 sites, membership and room booking, delivered 2025
- Tidemark Learning Centre, single site, catalogue and lending, delivered 2024
